## EXECUTIVE SUMMARY

I help enterprise organizations commercialize **Physical AI, Industrial Autonomy, and Agentic AI** — AI systems that sense, reason, and act in the physical world.

For 18 years, I've entered complex, long-cycle B2B markets before category language exists, building GTM architecture that converts buyer skepticism into signed contracts. My work spans **Schneider Electric, Dell Technologies, Uptake, UST,** and enterprise AI clients across OT/IT convergence, predictive operations, cyber-physical resilience, and industrial SaaS.

I created the **Industrial Autonomy Stack**, the **Physical AI Cockpit**, and the **GTM Architecture (Sense → Reason → Act)** to help enterprises adopt AI that interacts with physical operations, and wrote a GTM Library of eight executive briefs on how industrial autonomy actually gets bought.
